

Student Record Management System

Python Mini Project – Module 2

This simple project allows the user to add student details, view student records, and exit the program. It practices Python lists, dictionaries, input, conditions, and loops.

Python Code

```
students = []

while True:
    print("\n--- Student Record System ---")
    print("1. Add Student")
    print("2. View Students")
    print("3. Exit")

    choice = input("Enter your choice: ")

    if choice == "1":
        name = input("Enter student name: ")
        age = input("Enter age: ")
        course = input("Enter course: ")

        student = {
            "name": name,
            "age": age,
            "course": course
        }

        students.append(student)
        print("Student added successfully!")

    elif choice == "2":
        if len(students) == 0:
            print("No students found.")
        else:
            for student in students:
                print(student)

    elif choice == "3":
        print("Thank you!")
        break

    else:
        print("Invalid choice.")
```

Sample Output

```
--- Student Record System ---
1. Add Student
2. View Students
3. Exit
Enter your choice: 1
Enter student name: Pujitha
Enter age: 20
Enter course: AIML
Student added successfully!

Enter your choice: 2
{'name': 'Pujitha', 'age': '20', 'course': 'AIML'}
```

How to Run

Save the code as **student.py**. In the VS Code terminal, activate your virtual environment and run **py student.py**. Do not upload the **myenv** folder to GitHub.
